Methapharm successfully implements the LORENZ docuBridge® eCTD solution

Methapharm is pleased to announce that it has completed implementing LORENZ's docuBridge® Submission Management System with the successful filing and review of our sample eCTD submission with the US Food and Drug Administration. The docuBridge system allows Methapharm to submit electronic submissions with the US FDA and the Canadian Therapeutic Products Directorate (TPD) thus greatly increasing our ability to ensure accurate and timely regulatory submissions for our partners worldwide.

Health Canada has previously announced that it had selected LORENZ to supply its docuBridge solution for the TPD's eCTD E-Review Project.

LORENZ's docuBridge is the most proven, most comprehensive, and the most advanced eCTD and Product Lifecycle Submission Management System worldwide. It is the only software used by both industry for the production of electronic submission as well as regulatory agencies for the review of electronic submissions. Moreover, LORENZ is a leader in submitting electronically in all ICH regions, including Japan.

® docuBridge is a registered trademark of Lorenze Life Sciences Ltd.
