Methapharm commences implementation of Axway's Synchrony ePedigree solution

Methapharm is pleased to announce that it has started implementation of the Synchrony ePedigree solution from Axway Inc. to provide electronic pedigrees.

Axway's Synchrony ePedigree solution is an award-winning, EPC Global certified solution that provides supply-chain visibility as well as compliance with a growing number of state and industry standards. Some 600 companies rely on Axway's Healthcare Compliance Suite and core technology, including the top 10 pharmaceutical manufacturers, all of the top North American pharmaceutical distributors, the top three online healthcare exchanges, numerous retail pharmacies and medical facilities, and all of the major regulatory bodies.

While legislative requirements for ePedigree are uncertain at this time, Methapharm feels that early implementation is a positive step towards compliance with Federal, State and Industry regulations. Moreover, it provides further assurance to our distribution partners of our commitment to the highest standards of service.
