

# OptiStar® Elite

# The Smart Choice for MR Imaging

## Workflow efficiency

### Dual syringe powerhead

Perform both single and dual syringe injections used in the most advanced MRI protocols.

### Versatile syringe options

Draw empty syringes outside the exam room or use Guerbet prefilled syringes.

### Enable from console or powerhead

Minimize delays by enabling the injector from either the powerhead or the control console.

### Multi-phase programming

Save up to 40 four-phase protocols.

### Auto Retract

Remove syringes quickly from the powerhead without waiting for rams to fully retract.

### Battery-free operation

Eliminate time and cost associated with battery charging and replacement.

### Versatile mounting options

Accomodate any site with pedestal, mobile, or ceiling mounting options.

## Patient comfort and care

### Volume precision down to 0.1 mL

Enables precise injections of lower doses of gadolinium.

### Patency Check® feature

Check for vein patency at patient side.

### Timing Bolus® feature

Verify protocol setting by easily performing a test injection.

### Variable drip mode

Switch between injection and drip mode to help ensure IV line patency throughout the procedure.
